

# HUBER+SUHNER Special Communication

11/2019

## Ultra-Wide Band Omni

The UWB Omni is the only antenna on the market covering the frequencies for Tetra, all GSM and LTE-Bands as well as 5G. Ideal for Small Cells, Campus and moveable masts.

## First Dual-Band Panel

First Dual-Band Panel combining Tetra and LTE. New Specifications enable cost efficient revolution in PMR Network Planning.

## Ruggedized vehicle antenna

Extremely strong vehicle antennas. Portfolio with various frequency combinations. Optional NATO approved Magnet Mount available.

## Direct GPS-over-Fiber

The world's first "truly copperless" link – as it uses fiber optic cable to distribute both power and signal. The use of Power-over-Fiber perfectly addresses power delivery constraints in remote antenna applications.

## Flexible low-loss RF cables

The Spuma product family stands for lowest loss with halogen free materials. Shielding and VSWR are optimized up to 6 GHz. The cables are more flexible than corrugated ones, allowing easier handling and installation.

## EMP and surge protection

More than four decades of experience in developing and manufacturing coaxial lightning EMP and NEMP protectors are the foundation of the current RF protection portfolio.
